Summary

Technical Leadership and Cloud Innovation With 15+ years of IT expertise, I architect and deliver enterprise-grade cloud solutions specializing in Azure AD, Microsoft 365, and multi-cloud environments. My foundation combines a Computer Science degree with industry certifications (AWS Cloud Practitioner, Cisco DevNet Associate) and hands-on experience across network infrastructure, cybersecurity, and cloud migration strategies. ****Impact-Driven Problem Solving**** I excel at transforming complex technical challenges into scalable, resilient systems that drive business outcomes. My approach merges technical precision with strategic thinking—leveraging emerging technologies like AI/ML integration, zero-trust security models, and infrastructure-as-code to build future-ready solutions. ****Community Impact and Social Innovation**** Beyond technical expertise, I'm passionate about technology as a catalyst for positive change. During COVID-19, I supported vulnerable communities through telecommunications services, then contributed to Athens International Airport's critical infrastructure rebuild—enabling safe travel and economic recovery. Currently completing my Master's research in data-driven agricultural innovations, I'm exploring how smart technology can empower sustainable farming and rural communities. My work bridges technical mastery with social impact, creating solutions that are both efficient and meaningful. ****Key Focus Areas:** • Cloud Architecture and Migration (Azure, AWS, M365) • Cybersecurity and Zero-Trust Implementation • AI/ML Integration and Data Analytics • Infrastructure Automation and DevOps • Sustainable Technology Solutions ****Connect and Collaborate:** Portfolio: <https://www.baltzakisthemis.com> Email: baltzakis.themis@gmail.com

Experience

Estarta Solutions

Systems and Network Engineer

December 2024 - March 2025 (4 months)

Key Responsibilities:

Design, deploy, and manage Cisco virtualization platforms including Cisco UCS (Unified Computing System), HyperFlex, and Cisco ACI (Application Centric Infrastructure)

Implement and configure virtual machine environments using VMware vSphere, ESXi, and integration with Cisco hardware

Configure and optimize Cisco UCS B-Series and C-Series servers, fabric interconnects, and chassis management

Manage Cisco HyperFlex hyperconverged infrastructure solutions for storage, compute, and networking

Implement network virtualization solutions using Cisco ACI and Nexus platforms

Perform capacity planning, resource allocation, and performance tuning for virtualized environments

Troubleshoot complex virtualization issues across compute, network, and storage layers

Conduct system upgrades, firmware updates, and patch management on Cisco infrastructure

Create and maintain technical documentation including architecture diagrams, configuration standards, and runbooks

Collaborate with international teams and deliver solutions for clients across multiple regions

Monitor infrastructure performance and implement optimization strategies

Cosmos Business Systems Group

Information Technology Support Engineer

March 2023 - May 2024 (1 year 3 months)

Greece

Azure Active Directory (Azure AD) Support:

As an Azure AD Support Specialist, I specialized in managing and troubleshooting Azure Active Directory services. I was responsible for maintaining secure identity and access management in Azure AD. My duties included user provisioning and de-provisioning, group management, and implementing access control through role-based access control (RBAC) and conditional access policies. I provided expert assistance in resolving

authentication and authorization issues, ensuring secure access to Azure resources.

Microsoft 365 (M365) Support:

As an M365 Support Specialist, I provided comprehensive support for Microsoft 365 services. This involved resolving end-user issues related to M365 applications such as Outlook, Word, Excel, SharePoint, and Teams. I offered expertise in email configuration, account management, and collaboration tools within the M365 suite. Additionally, I proactively monitored and maintained M365 services, ensuring optimal performance and compliance with security and data protection policies.

Intune Support:

In my role as an Intune Support Specialist, I specialized in mobile device management (MDM) and mobile application management (MAM) using Microsoft Intune. I provided responsive support for configuring and troubleshooting Intune policies, device enrollment, and application deployments across various mobile platforms. I was the go-to resource for resolving device-related issues, including connectivity problems and application installations.

CPI SA

Information Technology Department
February 2023 - March 2023 (2 months)
Athens, Attiki, Greece

CPI (Outsourced @ Nielsen Greece)

IT Consultant:

As an IT consultant, I provided strategic guidance to organizations, helping them align their technology initiatives with their business goals. I collaborated closely with clients to assess their IT needs and develop technology roadmaps. I recommended solutions to enhance efficiency, security, and cost-effectiveness. My role included expertise in technologies like Active Directory (AD), CyberArk, and ServiceNow, and I provided insights to clients on how to leverage these solutions effectively.

Active Directory (AD):

I managed and maintained Active Directory environments for clients. This included user account provisioning, group management, and access control. I ensured secure authentication and authorization mechanisms, implemented security best practices, and addressed AD-related technical issues. My expertise in AD contributed to efficient user management and access control within client organizations.

ServiceNow:

I utilized ServiceNow as a platform to manage and track IT service requests, incidents, and inventory. I was responsible for configuring and customizing ServiceNow workflows to align with client-specific processes. This helped streamline service delivery and incident resolution. I also leveraged ServiceNow for managing and maintaining IT asset inventories efficiently.

Okta:

Identity and Access Management (IAM): Okta is primarily used for IAM. Ensure that user identities are properly managed, and access to applications and resources is controlled through multi-factor authentication (MFA) and single sign-on (SSO).

CyberArk:

Essential for robust Privileged Access Management (PAM). It secures credentials through Vault Management, enforces strict Access Control with RBAC and PoLP, and provides vigilant Monitoring and Alerts. This comprehensive approach safeguards sensitive data and critical systems, making it indispensable in today's cybersecurity landscape.

Printec Group
